

Voting Power (in-depth)

Factor	Weightage	Description	Measurement
Token Holdings	50%	The number of LumosDAO tokens a user holds.	- Number of tokens
Activeness on the DAO	25%	Measures a user's level of engagement within the DAO.	- Voting history - Proposal comments
Stellar Wallet Metrics	25%	Various indicators based on the user's Stellar wallet.	- Wallet age - Number of trades - Total account balance (in USD)

Voting Power (VP) = (0.50×Token Holdings Score) + (0.25×DAO Activeness Score) + (0.25×Wallet Metrics Score)

Here's a breakdown of each term in the formula:

Voting Power (VP)

Voting Power (VP): The final voting power of a user for a particular proposal or vote.

Token Holdings Score

Token Holdings Score: A numerical value representing the quantity of LumosDAO tokens a user holds.

DAO Activeness Score

DAO Activeness Score: A numerical value calculated based on the user's engagement level within the DAO, including voting history and proposal comments.

Wallet Metrics Score

Wallet Metrics Score: A numerical value calculated based on various Stellar wallet metrics such as wallet age, number of trades, number of payments, and total account balance in USD.

The individual scores for Token Holdings, DAO Activeness, and Wallet Metrics would need to be normalized so that they can be effectively added together in the formula. This way, each of these three scores contributes to the final Voting Power according to their assigned weightage.
